Topraklama  
Sistemleri

Date : 18.06.2015  
No : 18062015-001  
Subject : Working Principle of Liva ESE Lightning Rods.

Hi, Dear Mr. James;

Otomasyon  
Sistemleri

We officially, **LIVA GRUP ELEKTRİK ELEKTRONİK İNŞAAT SAN. TIC. LTD. ŞTİ.** located in Izmir-TURKEY confirm and declare that all E.S.E. Lightning Rods get their energy from the changes of electrostatic field density forming in the air. This structure make a naturel ion genarator charging dependently on electrical field around it self. Than ionised area invite the lightning strikes, because the ionized fields are conductor area all the times. Therefore, lightning occurring in the near field pulls on the Liva ESE Lightning Rods

Izmir City –Turkey
